Dear,

As a Computer Engineering student at the Federal University of Ouro Preto, my goal is to live all academic experiences with excellence and completeness. Since I entered the milieu, I have been participating in every academic opportunity I have had. I always say that the University is my future, and that I will build it with mastery. I had experiences with research, participating in two Scientific Initiation projects whose theme covered Artificial Intelligence in the Scope of Quantum Computing, which resulted in the publication of the book chapter "An essay on the foundations of Quantum Computing¹", I was a monitor and tutor of Differential and Integral Calculus I and currently I am a monitor of Algorithm and Data Structure. I have already participated in academic events such as the UFOP professions exhibition, presenting a robotics work that I developed in the first period for the discipline of Analytical Geometry and Linear Algebra; from Mostra Multi, which was an online event that took place during the pandemic and also from the Meeting of Knowledge as part of the production team and also presenting the work "Artificial Neural Networks in the Scope of Quantum Computing". I love studying and my life is all about learning new things. The opportunity to be able to live part of my graduation in another country amazes me. If given to me, it will be lived in the same way and with the same seriousness with which I take my studies within UFOP: with excellence and total dedication, seeking only the knowledge and learning of new techniques and culture.

Sincerely,
